

February 21, 2014

Dear United Technologies,

I'm very interested in the Generator Mechanical Engineer position (Job Number: 116229-06) that was advertised through After College website. I just graduated in December 2013 from the University of Southern California with major in Mechanical Engineering and specifying in Design and Control area.

During my time at USC, I had experience in analysis, especially in finite element analysis (FEA), in stress/strain, vibration, buckling, and thermal areas. Besides, I also had rich experience in team projects; not only during my time at USC, but in my time early in college. I am a good team worker. Furthermore, I have also taken design and control classes at USC. I believe my education background will greatly help in my career life.

With programming experience I have already had, I have also self-studied java and python. I believe I am a self-motivated person, and my personality of ambitiousness, proactiveness and energeticness will remain myself competent.

The combination of my education at USC, project experience, and my personality of self-motivation and -accomplishment has and will be equipping me with skills necessary to be a successful employee. I also believe this position will provide me with opportunity with which I can learn more and get more professional. I would like to discuss my qualifications with you in person. I look forward to hearing from you. Thank you for your time and consideration.

Sincerely,

Chung-Hau
