

February 05, 2014

Dear Deloitte,

I'm very interested in the internship position at consulting (Reference Code: CA77834JB) that was advertised through your careers site. I was a graduate student at the University of Southern California majoring in Mechanical Engineering and specifying in Design and Control area. I just graduated in December, 2013.

I have strong interest in design. During my time at USC, I have focused on design. By participating in course projects alone and in teams, I knew more about innovative thinking, how to manage new ideas, how to embody the ideas systematically, and, vice versa, how to translate design concepts into detailed specifications; also, I have been getting more used to working and communicating with people from different professions. Further, design is a multi-disciplinary profession, so I have also taken control and computer-aided design (CAD) courses to broaden my ability so that I have not only knowledge in theories but techniques in practice.

In addition, I have programming experience using MatLab, C++, visual basic, etc., and I am still self-studying java and python now. This instance can manifest my ambition, and I can be confident that my personality like this can remain myself competent while programming skill becomes more and more essential in engineering area.

The combination of my education at USC, project experience, and my personality has and will be equipping me with skills necessary to be a successful intern. I believe this position will provide me with opportunity with which I can learn more and get more professional. I would like to discuss my qualifications with you in person. I look forward to hearing from you. Thank you for your time and consideration.

Sincerely,

Chung-Hau
